Edinburgh Postpartum Depression Screening Tool

Responses are scored 0, 1, 2, or 3 according to the severity of the symptoms. Some questions are reverse scored (i.e. 3, 2, 1, and 0). The total score is determined by adding the scores of each of the 10 questions. If you have a score of 13 or above, please call for an appointment. *Regardless of your total score, if you have thoughts of harming yourself or your baby, please seek help immediately.*

This is only a preliminary screening test for depressive symptoms. It is designed to give a preliminary idea about the presence of mild to moderate depressive symptoms that indicate the need for an evaluation by a psychiatrist. It does not in any way replace a formal psychiatric evaluation. Source: J.L. Cox, J.M. Holden, and R.
